Course Information

Data Science Math Skills by **Duke University** is a online course you can take on this site Coursera.

Motivation for Learning & Re-learning

A lot of graduate school students struggle with Data Science courses only because of their lack of knowledge and/or understanding of Mathematics for Data Science. The course gives an overview of Mathematical concepts you will encounter while learning Data Science.

Supplemental Notes and Videos

Here's how I make my notes:

My notes include videos from Khan Academy. The content's the same and often a bit better due to lack of errors. Those in text are usually from the Coursera video transcripts.

I indicate why it is important to learn such concepts through Further Reading notes.

Sets and What They're Good For

Set Basics and Vocabulary

• Set Theory

Descartes Was Really Smart

Plotting Points

- The x-axis is going to be the set of all points x-y in the Cartesian plane, x-y in R2, such that their y coordinate is zero.
- We divide the Cartesian plane into four separate regions, and these we call quadrants.
- Coordinate plane: quadrants

Distance Formula

• Distance formula

$$d = \sqrt{(x_2 \, \bar{} \, x_1)^2 + (y_2 \, \bar{} \, y_1)^2}$$

Point-Slope Formula for Lines

• Point Slope Form

$$y - b = m(x - a)$$

Slope-Intercept Formula

- Slope Intercept Equation
- Intro to Slope Intercept Form

$$y = mx + b$$
